### **DETAILED ACTION**

Applicants' arguments, filed 05/11/09, have been fully considered. Rejections and/or objections not reiterated from previous office actions are hereby withdrawn. The following rejections and/or objections are either reiterated or newly applied. They constitute the complete set presently being applied to the instant application.

#### ***Claim Rejections - 35 USC § 103***

**Claims 3-5** stand rejected under 35 U.S.C. 103(a) as being obvious over BYKOV, et al (see PTO-892 dated 12/04/2007), in view of Hartmann et al (see PTO-892 dated 12/04/2007).

Applicants assert the now amended claim 5 require activation of initially inactive wild type p53 and that the prior art is only directed to activation of mutant p53.

First, Bykov et al appear use the term "mutant" as synonymous with the term "defective" (pg 9 line 29). On the other hand, Applicants appear to define the term "mutant" as being linked to a mutation in the gene sequence of p53 (see Applicants response dated 05/11/09, pg 5 third paragraph). Contrary to Applicants assertion, Examiner interprets the term broadly to include inactive wild p53, given the inactive conformational form creates a "defect" which inhibits the binding of p53 to DNA.

Second, it would appear that "inactive wild p53" is present in malignant melanoma cells generally (see instant specification pg 5 lines 12-15). "[T]he discovery of a previously unappreciated property of a prior art composition, or of a scientific explanation for the prior art's functioning, does not render the old composition

patentably new to the discoverer." Atlas Powder Co. v. Ireco Inc., 190 F.3d 1342, 1347, 51 USPQ2d 1943, 1947 (Fed. Cir. 1999). Here, the recognition that PRIMA-1 not only activates what Applicants define as "mutant p53", but also Applicant's defined "inactive wild p53" in malignant melanoma does not render the instant claims patentable over the prior art, where the same agent is administered to the same patient population (i.e. patients with malignant melanoma).

Finally, where the treatment of malignant melanoma with PRIMA-1 is made obvious by the prior art, one of ordinary skill would expect when treating the larger population of patients with Applicants defined "mutant" p53, that a subpopulation will have the instantly recognized "inactive wild p53", as defined by Applicants. As such, it would be obvious to treat the entire population, thereby effectively treating the now defined subpopulation.

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
